

UP is obsessed with melting things...

Whether “re-fusing“ mardi gras beads in a system of ovens and kilns to create recycled plastic sheets for forming into lighting or Kiln forming thru heat fusing glass into jewelry and house wares, UP love to melt stuff...living a tropical city where we sweat all summer, we often ask ourselves...shouldn't we be doing this in a cold climate using our work heat to keep us warm and heat out house...but you know what they say as to why we are all so crazy here in New Orleans – its not the heat it's the humidity...
